

Overview

There's no getting around it, the internet is ingrained in modern business. Even brick-and-mortar retail establishments with minimal online presence rely on the internet for managing inventory, running point-of-sale systems, and back-office operations. Keep that connectivity from becoming a liability with the Mission Multiplier SATURN-i.

Prioritize internet traffic for administration tools and point-of-sale systems. Stop malware before it touches your system, making sure it never even has the chance to interfere with customer transactions. Block access to inappropriate or distracting websites and applications to keep employees on-task. And do it all with one cost-effective solution.

Solutions Perfect for Retail Businesses

Take a look at some of the biggest benefits the SATURN-i has to offer businesses in the retail industry.

Keep Operations Running Smoothly

Ensure that business-critical traffic is always given top priority. Bandwidth Control enables you to optimize bandwidth usage so recreational and inappropriate traffic do not impact critical administrative and point-of-sale systems.

Stop Threats in Their Tracks

Block would-be intruders, phishing attempts, viruses, ransomware, botnets, even annoying ads before they come anywhere close to infiltrating the system with a whole suite of protection and filtering applications.

Block Distractions, Increase Productivity

Social media, apps, and websites are designed to be distracting and addictive. That can cause major productivity issues. Web filtering and application control make blocking network access to inappropriate or distracting sites and apps both quick and easy.

Configuring SATURN-i for Retail

Customizing the Mission Multiplier SATURN-i to your specific needs is simple and easy. Start with our suggested Retail Configuration, then add or subtract apps to customize it to your liking.

SATURN-i Has You Covered

- ✓ Unique and granular policies with Active Directory/LDAP integration for tiered service levels and organizational departments
- ✓ Prevent network slowdowns caused by any individual or group of users and applications
- ✓ Optimized bandwidth for business-critical back-office applications (reservation and administration tools, POS, etc.)
- ✓ Web caching for frequently accessed IP-based content
- ✓ Stops malware before it can enter your network
- ✓ Helps meet PCI DSS requirements
- ✓ Layer 7 application awareness to identify all incoming application traffic regardless of port destination
